Docket No.: 80364(47762)

AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions, and listings, of claims in the application.

3

- (Currently Amended) A production method of core-shell type highly liquid absorbent resin particles comprising:
 - (1) a first step in which a particle core portion is formed by suspension polymerizing an aqueous solution (e) containing (meth)acrylic acid, a crosslinking agent (c) and an anionic surfactant (d) in an amount of 1 to 10 parts by mass with respect to 100 parts by mass of (meth)acrylic acid in a hydrophobic organic solvent (a) containing a nonionic surfactant (b), the anionic surfactant (d) being represented by the following general formula (f):

R'—SO₃M (1)

wherein, R' represents an alkenyl group having 8 to 30 carbon atoms or a hydroxyalkyl group having 8 to 24 carbon atoms, and M represents an alkaline metal, quaternary ammonium or quaternary amine, and

- (2) a second step in which a shell portion that covers the particle core portion is formed by suspension polymerizing an aqueous solution (g) containing a water-soluble vinyl polymer (f), having carboxyl groups and polymerizable unsaturated double bonds and having a number average molecular weight of 500 to 10000, in a suspension obtained in the first step.
- (Original) The production method of core-shell type highly liquid absorbent resin particles according to claim 1, wherein the water-soluble vinyl polymer (f) is polyacrylic acid having polymerizable unsaturated double bonds.
 - (Canceled).
- (Original) The production method of core-shell type highly liquid absorbent resin particles according to claim 1, wherein the nonionic surfactant (b) has an HLB value of 4 to 13.

Docket No.: 80364(47762)

5. (Original) The production method of core-shell type highly liquid absorbent resin particles according to claim 1, wherein the nonionic surfactant (b) is at least one type selected from the group consisting of polyoxyalkylene sorbitan fatty acid ester having an HLB value of 9 to 11, polyoxyalkylene glycerin fatty acid ester having an HLB value of 9 to 10, and phosphate triester having an HLB value of 7 to 13.
